

Building Partnerships in Freight

As Network Rail moves into Control Period 4 (April 2009 to March 2014) there will be unprecedented investment in expanding the network and improving services for freight users.

Network Rail will invest almost £7.6bn on rail expansion projects, and £10.8bn in renewals, £10bn will be spent on day-to-day maintenance and the costs of operating and running the network over the period.

This investment will not only reduce journey times, making rail freight more efficient and cost effective but also provides a strong environmental case for increased rail freight use over road freight.

Network Rail is keen to work with industry partners in the delivery of a growing freight railway and have a team of people who can help meet your business needs. If you need assistance, then contact one of our locally based experts below.
